Francis and Mantua. 2003. Section 3A Pg 37: “While Pacific salmon have persisted in the face of exceptional climate variability for thousands of years—involving such large-scale factors as the advance and retreat of glaciers covering huge swaths of western North America—future climate change projections are troubling when considered in combination with the impacts that human development has had, and continues to have, on the landscapes of Puget Sound and elsewhere (Francis and Mantua 2003).”

Francis and Mantua. 2009. Pg. 38: “Francis and Mantua (2009) find that in general, salmon populations in regions with healthy habitat are likely to persist in the face of climate change as long as the time scale of environmental change does not exceed the rate at which they are able to adapt.”
